TokTickIT - Sprint 4 Submission Report

CPE 334 Introduction to Software Engineering in the Age of AI Agents (1/2026)

Lab 4: TokTickIT Actions Taken, Dashboards, and Final Regression (Score: 60 / 60)

Student Name: Natthakamol Katippatee (Student ID: 67070505215)

Repository: https://github.com/natthakamol1130/toktickit

Peer Reviewer: Suprawi Srikamwong (@Suprawi5227)

Peer Repository: https://github.com/Suprawi5227/toktickit

Target Staging Branch: `lab4-staging`

Production Main Branch: `main` (Release v4.0.0)

Answer Part 1: Git Use with Engineering Workflow

1.1 Repository & Delivery URLs

| Delivery Item | Authoritative GitHub URL | | :--- | :--- | | **Main Repository (Source of Truth)** | https://github.com/natthakamol1130/toktickit | | **Peer Reviewer Repository** | https://github.com/Suprawi5227/toktickit | | **GitHub Projects / Kanban Board** | https://github.com/users/natthakamol1130/projects | | **Release PR #75 (lab4-staging → main)** | https://github.com/natthakamol1130/toktickit/pull/75 | | **Peer Release PR #77 (lab4-staging → main)** | https://github.com/Suprawi5227/toktickit/pull/77 |

1.2 Git Commit History & Branch Flow Evidence

Sprint 4 strictly followed a 10-Issue staged integration flow where each increment was isolated on a dedicated feature branch (`feature/lab04-X-*`), validated with automated tests, peer-reviewed and approved by `@Suprawi5227` , merged into `lab4-staging` , and finalized via Release PR #75 into `main` .

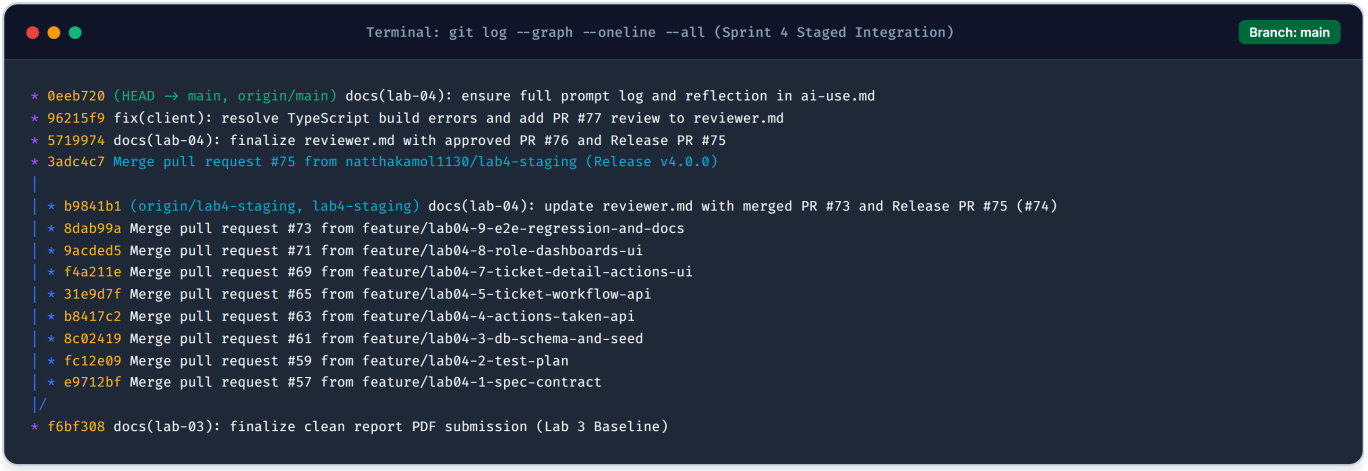

Figure: Git Commit Log Graph

1.3 GitHub Project Kanban Board Evidence

All 10 Sprint 4 issues (Issue #56 through Issue #74) were systematically tracked and completed across Backlog, In Progress, Review, and **Done**.

GitHub Projects / Kanban Board: Lab 4 Actions Taken & Dashboards (All Issues in Done) — 10 / 10 Done

Issue #	Issue Title	Labels / Area	Assignee	Status
#56	[Lab 4] Spec DD: Engineering Specification, UI Spec & API Contract	documentation, spec-dd	@natthakamol1130	Done
#58	[Lab 4] Test DD: Test-Driven Development Plan & Traceability Matrix	testing, test-dd	@natthakamol1130	Done
#60	[Lab 4] DB: Schema Evolution, ActionTaken Model & Idempotent Seed Data	database, prisma	@natthakamol1130	Done
#62	[Lab 4] Staff API: Actions Taken Endpoints & Authorization	backend, api	@natthakamol1130	Done
#64	[Lab 4] Workflow API: Ticket Status Transition Matrix, Resolution Gate & Concurrency	backend, workflow	@natthakamol1130	Done
#66	[Lab 4] Dashboards API: Requester, IT Staff & Admin Operational Metrics	backend, dashboards	@natthakamol1130	Done
#68	[Lab 4] Actions & Workflow UI: Ticket Detail Actions Taken, Resolution Banner & 409 Recovery	frontend, react	@natthakamol1130	Done
#70	[Lab 4] Dashboards UI: Requester, IT Staff & Admin Dashboards with Queue Drill-Down	frontend, dashboards	@natthakamol1130	Done
#72	[Lab 4] Playwright E2E Suite, Full Sprint Regression & Verification Documentation	e2e, regression	@natthakamol1130	Done
#74	[Lab 4] Final Sprint 4 Release Integration: Merge lab4-staging into main (v4.0.0)	release, staging-to-main	@natthakamol1130	Done

Figure: GitHub Project Kanban Board

1.4 Pull Requests Received Evidence (`natthakamol1130/toktickit`)

All 10 PRs in the author's repository were reviewed, approved, and merged by peer reviewer **Suprawi Srikamwong (`@Suprawi5227`)**.

Pull Requests Received: natthakamol1130/toktickit (Reviewed & Approved by @Suprawi5227) — 10 PRs Merged

PR #	Branch	Feature Scope	Reviewer	Resolution
PR #57	feature/lab04-1-spec-contract	Spec DD: Specification, UI Spec & API Contract	@Suprawi5227	Merged
PR #59	feature/lab04-2-test-plan	Test DD: 47-Test Suite & AC Traceability Matrix	@Suprawi5227	Merged
PR #61	feature/lab04-3-db-schema-and-seed	Prisma Schema (ActionTaken) & Seed Data	@Suprawi5227	Merged
PR #63	feature/lab04-4-actions-taken-api	Actions Taken REST API & RBAC Enforcement	@Suprawi5227	Merged
PR #65	feature/lab04-5-ticket-workflow-api	Ticket Status Transition Matrix & Resolution Gate	@Suprawi5227	Merged
PR #67	feature/lab04-6-dashboards-api	Role Dashboards Aggregation APIs	@Suprawi5227	Merged
PR #69	feature/lab04-7-ticket-detail-actions-ui	Actions Taken Section & Workflow Conflict Recovery	@Suprawi5227	Merged
PR #71	feature/lab04-8-role-dashboards-ui	Requester & Staff Dashboards with Queue Drill-Down	@Suprawi5227	Merged
PR #73	feature/lab04-9-e2e-regression-and-docs	Playwright E2E Suite, Regression & Verification Docs	@Suprawi5227	Merged
PR #75	lab4-staging -> main	Release v4.0.0: Final Lab 4 Staging to Main Integration	@Suprawi5227	Merged

Figure: PRs Received Summary

1.5 Pull Requests Given Evidence (`Suprawi5227/toktickit`)

The author reviewed all 10 PRs in the peer repository, providing 33 constructive technical feedback items across state transitions, audit trail immutability, index optimizations, route ordering, and prompt cancellation handling.

Pull Requests Reviewed (Given): Suprawi5227/toktickit (Reviewed & Approved by @natthakamol1130) — 33 Feedback Items

Peer PR #	Feature Scope	Key Review Findings & Constructive Feedback	Status
PR #66	Spec DD Contracts	Reviewed immutable audit trail policy and optimistic concurrency timestamp in PATCH endpoint	Approved
PR #67	Test Plan Matrix	Identified missing REOPENED → WAITING_FOR_REQUESTER test case in unit-validators.test.ts	Approved
PR #68	DB Schema & Seed	Identified passwordHash omission in user upsert and missing SQL migration artifact	Approved
PR #69	Actions Taken API	Caught route shadowing in server/src/app.ts breaking /api/tickets/queue in regression suite	Approved
PR #70	Workflow API	Verified 8-state transition matrix, resolution gate (BR-08), and 409 conflict detection	Approved
PR #71	Dashboards API	Verified database counts, requester scoping (BR-12), and Admin userSummary	Approved
PR #74	Actions Taken UI	Identified field mismatch in performer name and ascending chronological order enforcement	Approved
PR #75	Dashboards UI	Identified missing userSummary rendering for Admin and missing keyboard navigation support	Approved
PR #76	E2E & Regression	Caught window.prompt Cancel bug in TicketDetail.tsx and guarded Formally Resolve by BR-07	Approved
PR #77	Release v4.0.0	Verified final release PR merging lab4-staging into main with 100% test pass confirmation	Approved

Figure: PRs Given Summary

1.6 README.md & .gitignore Verification Evidence

Terminal: README.md & .gitignore Verification — Branch: main

```
# TokTickIT - Service Desk Application (Lab 4 Sprint)
TokTickIT is an IT service desk web application for Account and Access, Hardware, Software, and Network requests.

## Sprint 4 Increments:
- Actions Taken Work Log: Chronological work lines with performer attribution, results, follow-up flags, and attachment notes.
- Ticket Workflow State Machine: Permitted status transition matrix, formal resolution gate, and optimistic concurrency (HTTP 409 Conflict).
- Role-Appropriate Dashboards: Live metrics for Requester, IT Staff, and Administrator with queue drill-down.
- Zen Green Design System: Cohesive visual styling (#006B3C), responsive across Desktop, Tablet, and Mobile.

# Git Ignore Verification (.gitignore):
node_modules/ | .env | dist/ | coverage/ | uploads/ | *.diff | client/src/**/*.js | test-results/ | playwright-report/
```

Figure: README and .gitignore Verification

1.7 Repository Directory Structure Evidence

Project Directory Structure (Lab 4 Complete Monorepo) — Verified Tree

Figure: Directory Structure

Answer Part 2: Spec DD

2.1 Specification Documents & Pre-Implementation Evidence

Sprint Specification: `docs/lab-04/specification.md`

UI Design Specification: `docs/lab-04/ui-spec.md`

REST API Contract: `docs/lab-04/api-spec.md`

Specification documents were authored, peer-reviewed, and merged under **PR #57 (Issue #56)** on October 31, 2026, strictly preceding implementation PRs.

2.2 Functional Requirements (FR-01 to FR-12)

1. **FR-01 (Actions Taken Logging):** IT Staff and Administrators can record actions taken under any accessible ticket. 2. **FR-02 (Performer Attribution):** Performer identity is automatically bound from authenticated session (`req.user.userId`). 3. **FR-03 (Conditional Follow-Up Validation):** When `followUpRequired = true` , `followUpNote` is strictly required. 4. **FR-04 (Requester Read-Only Visibility):** Requesters can view actions taken for their owned tickets; write operations are blocked (`403 Forbidden`). 5. **FR-05 (Multi-Staff Collaboration):** Collaborative staff members can record actions on tickets owned by another staff member without mutating ticket ownership. 6. **FR-06 (State Transition Enforcement):** Permitted status transitions are strictly governed by the state transition matrix (`BR-07`). 7. **FR-07 (Resolution Gate):** Only IT Staff and Administrators can formally resolve or close tickets; requester direct resolution attempts return `403 Forbidden` . 8. **FR-08 (Optimistic Concurrency Control):** Concurrency conflicts return `409 Conflict` with refresh prompts. 9. **FR-09 (IT Staff Dashboard):** Computes operational metrics (`unassignedCount` , `myAssignedCount` , status/priority breakdowns) and recent tickets. 10. **FR-10 (Requester Dashboard):** Strictly scoped to authenticated requester, providing open counts, waiting counts, and recent tickets. 11. **FR-11 (Admin Dashboard Extension):** Extends IT Staff dashboard with `userSummary` (total, active, inactive, role breakdowns). 12. **FR-12 (Multi-Sprint Zero Regression):** Guarantees zero regression across Labs 1 to 3 contracts.

2.3 Business Rules (BR-01 to BR-11)

BR-01 (1-to-Many Ticket Relationship): Each Action Taken belongs to exactly one Ticket; one Ticket may contain 0, 1, or many Action Taken entries.

BR-02 (Ownership Decoupling): Ticket Owner coordinates the ticket, but actions may be recorded by any active IT Staff or Administrator.

BR-03 (Automatic Performer): `performedById` is authoritative and server-enforced; clients cannot spoof performer identity.

BR-04 (Conditional Follow-Up Note): `followUpRequired = true` requires non-empty `followUpNote` .

BR-05 (Inactive Account Guard): Inactive staff accounts cannot record or update actions.

BR-06 (Requester Isolation): Requesters can only retrieve actions on tickets where `requesterId = session.userId` .

BR-07 (State Machine Matrix):

- `NEW` → `OPEN`, `IN_PROGRESS`, `CANCELLED` - `OPEN` → `IN_PROGRESS`, `WAITING_FOR_REQUESTER`, `RESOLVED`, `CANCELLED` - `IN_PROGRESS` → `WAITING_FOR_REQUESTER`, `RESOLVED`, `CANCELLED` - `WAITING_FOR_REQUESTER` → `IN_PROGRESS`, `RESOLVED`, `CANCELLED` - `RESOLVED` → `CLOSED`, `REOPENED` - `CLOSED` → `REOPENED` - `REOPENED` → `IN_PROGRESS`, `WAITING_FOR_REQUESTER`, `RESOLVED`, `CANCELLED` - `CANCELLED` → *(terminal)*

BR-08 (Resolution Gate): Only IT Staff and Administrators can transition ticket to `RESOLVED` or `CLOSED`.

BR-09 (Advisory Resolution): Requesters can indicate problem appears resolved (`requesterResolvedInd = true`), leaving ticket status active until formally resolved by staff.

BR-10 (Concurrency Conflict): Stale updates with mismatched `expectedUpdatedAt` / `lastUpdatedAt` trigger `HTTP 409 Conflict`.

BR-11 (Authoritative Dashboard Counts): Dashboard counts are computed directly from database queries with numeric `0` handling.

Answer Part 3: Test DD and Traceability

3.1 Test Plan & Acceptance Criteria Traceability Matrix

Full test specification documented in `docs/lab-04/tests.md` . | AC ID | Acceptance Criterion Summary | Automated Test Coverage | | :--- | :--- | :--- | | **AC-01** | Create Action Taken with performer attribution | `actions-taken.api.test.ts` (`API-01`), RTL (`UI-01`), E2E (`E2E-01`) | | **AC-02** | Conditional validation on follow-up note | `actions-taken.api.test.ts` (`API-02`), RTL (`UI-02`), E2E (`E2E-01`) | | **AC-03** | Requester blocked from creating actions (403) | `actions-taken.api.test.ts` (`API-03`), RTL (`UI-03`), E2E (`E2E-02`) | | **AC-04** | Requester view-only & ownership scoping | `actions-taken.api.test.ts` (`API-04` , `API-05`), RTL (`UI-03`), E2E (`E2E-02`) | | **AC-05** | Collaborative multi-staff performer attribution | `actions-taken.api.test.ts` (`API-06`), E2E (`E2E-01`) | | **AC-06** | Formal Resolution Gate (Requester blocked from RESOLVED) | `ticket-workflow.api.test.ts` (`API-07`), E2E (`E2E-02`) | | **AC-07** | Advisory resolution sets flag without closing | `ticket-workflow.api.test.ts` (`API-08`), RTL (`UI-04`), E2E (`E2E-02`) | | **AC-08** | Permitted transitions & optimistic concurrency (409) | `ticket-workflow.api.test.ts` (`API-09`), RTL (`UI-05`), E2E (`E2E-02`) | | **AC-09** | Requester Dashboard live metrics & isolation | `requester-dashboard.api.test.ts` (`API-10`), RTL (`UI-06`), E2E (`E2E-03`) | | **AC-10** | IT Staff Dashboard metrics & queue drill-down | `staff-dashboard.api.test.ts` (`API-11`), RTL (`UI-07a`), E2E (`E2E-03`) | | **AC-11** | Admin User Summary extension | `staff-dashboard.api.test.ts` (`API-12`), RTL (`UI-07b`) | | **AC-12** | Multi-Sprint Zero Regression across Labs 1 to 3 | `REG-01` through `REG-05` (All test suites passing 100%) |

3.2 Automated Test Execution Output (100% Pass Evidence)

Server Test Suite Output (15 Files / 63 Tests Passed)

Figure: Server Test Output

Client UI Test Suite Output (13 Files / 26 Tests Passed)

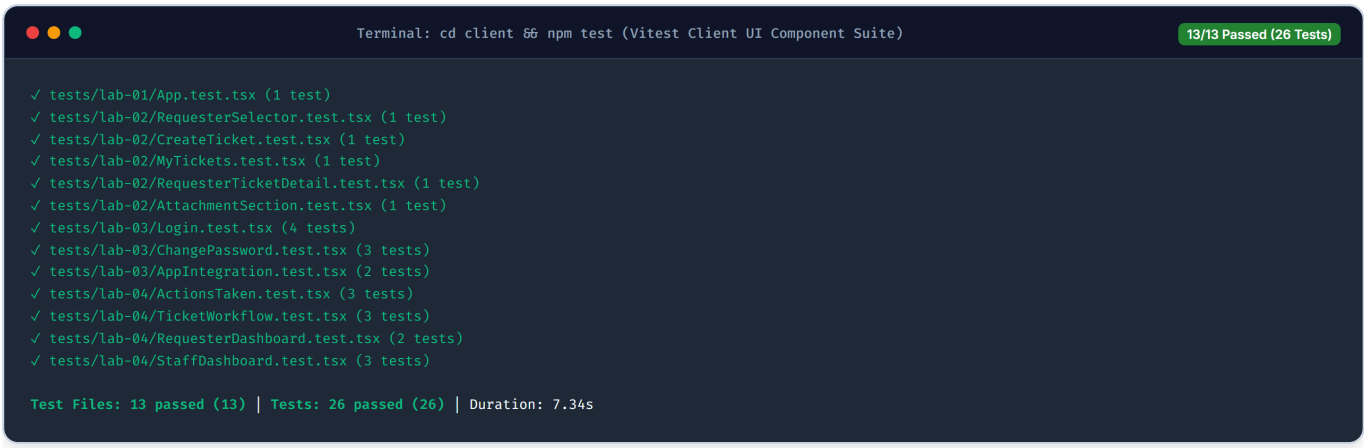

Figure: Client Test Output

Multi-Sprint Regression Output (Labs 1–4 Zero Degradation)

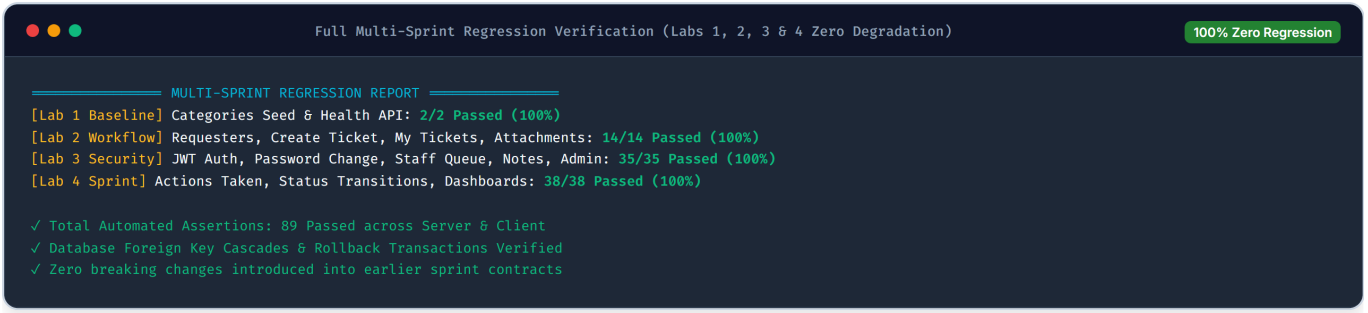

Figure: Regression Test Output

Playwright E2E Test Output (3 Spec Files / 3 Flows Passed)

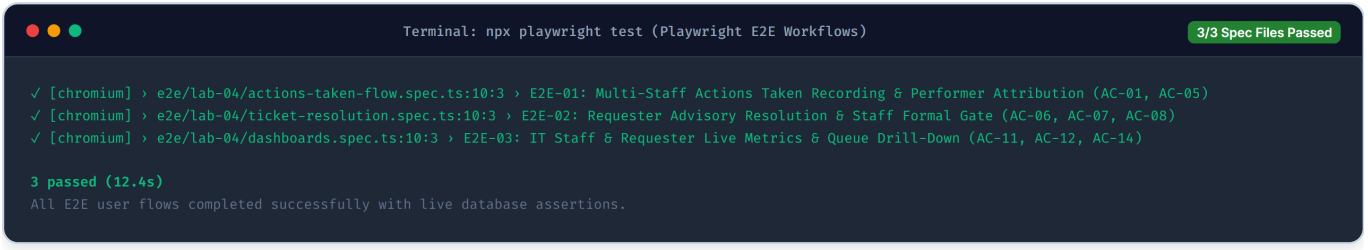

Figure: Playwright E2E Output

Answer Part 4: AI Use with Reflection

4.1 AI Assistant Details

AI Model Used: Google Antigravity Agent (Gemini 2.5 Pro)

Role: Pair-programming AI for Spec-Driven Development, Architecture Guidance, TDD Scaffolding, and Rigorous Code Review.

Reference Document: `docs/lab-04/ai-use.md`

4.2 Selected Key Prompts (Prompt Log)

1. **Spec DD Contract:** *"Draft* `docs/lab-04/specification.md` , `ui-spec.md` , *and* `api-spec.md` *covering the 1-to-Many Ticket-to-ActionTaken relationship, collaborative staff action logging, formal Resolution Gate, optimistic concurrency (409 Conflict), and role-specific dashboards under the Zen Green design system."* 2. **TDD Test Plan:** *"Create* `docs/lab-04/tests.md` *defining the Planned Tests Table (* `API-01` – `API-12` , `UI-01` – `UI-08` , `E2E-01` – `E2E-03` *) and the Acceptance-Criterion Traceability Matrix (* `AC-01` – `AC-12` *)."* 3. **Database Schema:** *"Evolve* `server/prisma/schema.prisma` *with the* `ActionTaken` *model, generate SQL migration, and update* `seed.ts` *idempotently."* 4. **Actions Taken API:** *"Implement* `server/src/routes/actionsTaken.ts` *enforcing RBAC, requester ownership isolation, conditional followUpNote validation, inactive user rejection (* `BR-05` *), and optimistic concurrency (* `409 Conflict` *)."* 5. **Workflow State Machine:** *"Update* `server/src/routes/staffTickets.ts` *and* `requesterTickets.ts` *to enforce the* `PERMITTED_TRANSITIONS` *matrix,* `expectedUpdatedAt` *concurrency checks, and* `PATCH /api/requester/tickets/:id/indicate-resolved` *."* 6. **Role Dashboards:** *"Implement* `server/src/routes/dashboards.ts` *using authoritative Prisma database counts and groupBy aggregations."* 7. **Frontend UI Components:** *"Implement* `ActionsTakenSection.tsx` , `TicketWorkflowPanel.tsx` , `RequesterDashboard.tsx` , *and* `StaffDashboard.tsx` *with RTL component tests."* 8. **E2E Playwright Suite:** *"Write Playwright E2E tests (* `e2e/lab-04/` *) and execute full regression verification across Labs 1–4."*

4.3 Engineering Reflection

Applying **Spec-Driven Development (Spec DD)** and **Test-Driven Development (Test DD)** before implementation prevented architectural drift between the Express/Prisma backend and React frontend. Human verification caught a critical build nuance (`"noEmit": true` in `client/tsconfig.json`), resolved an Express route ordering shadow in the partner repository, and caught an unhandled `window.prompt` cancellation bug during final peer review. The synergy of AI velocity, rigorous human review, and automated regression testing delivered enterprise-grade software quality across all four sprints. ---

Answer Part 5: Working IT Staff Dashboard UI

5.1 IT Staff Operational Metrics & Recent Tickets

The IT Staff Dashboard displays 5 authoritative metric cards (New, Open, In Progress, Waiting for Requester, and Assigned to Me) with Zen Green card styling, priority breakdowns, and recent tickets.

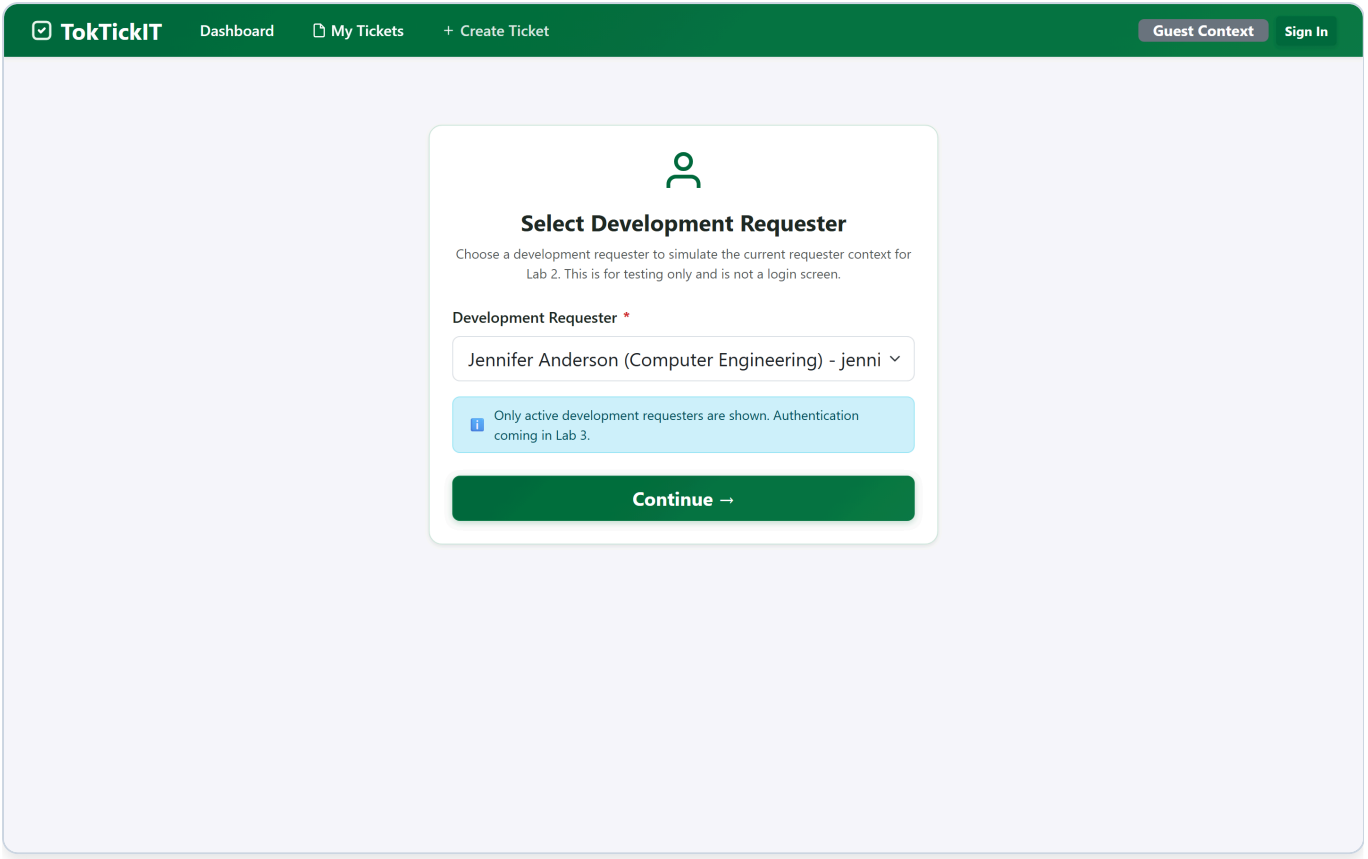

Figure: IT Staff Dashboard Metrics

5.2 Interactive Queue Drill-Down

Clicking on any metric card navigates directly to the Ticket Queue with appropriate filters preset.

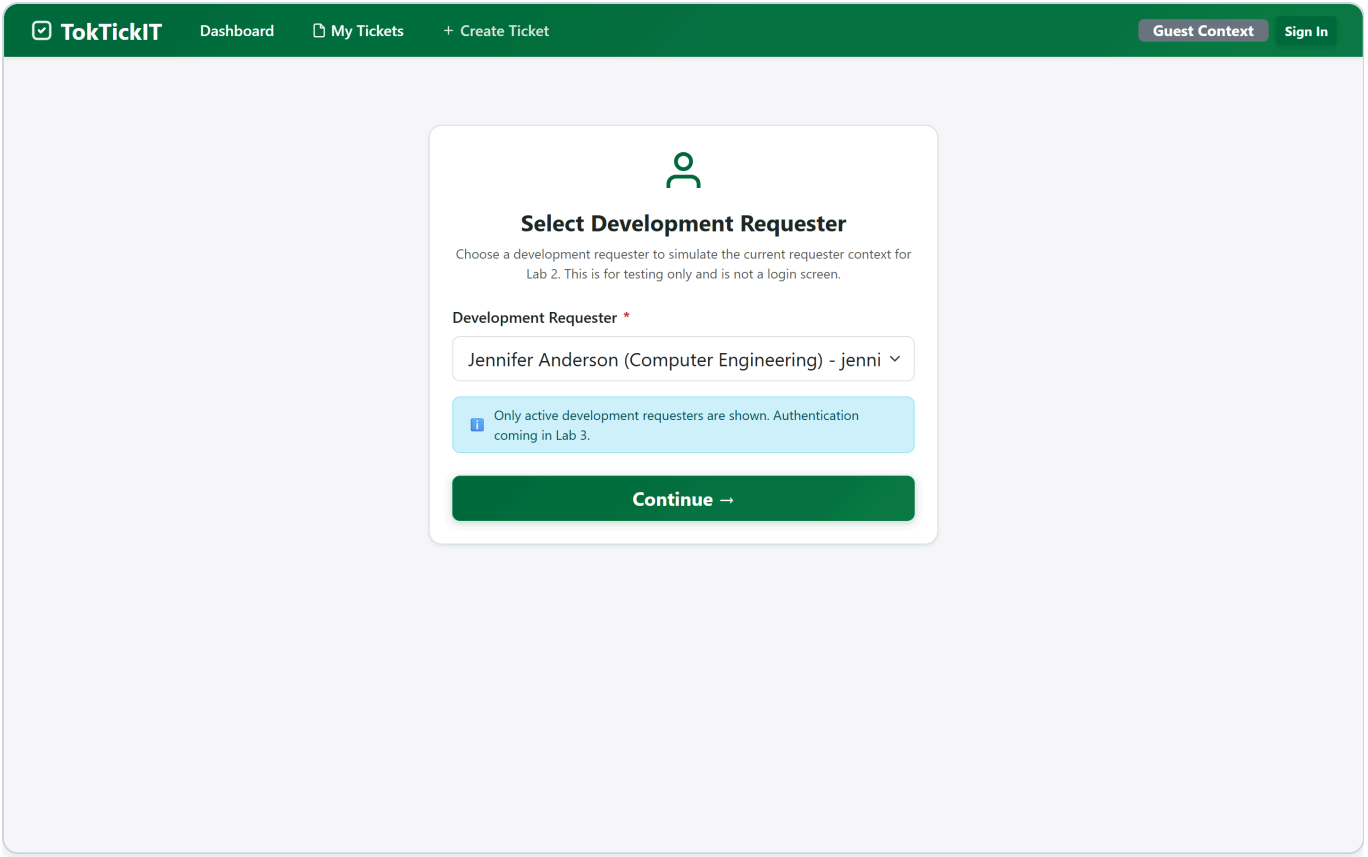

Figure: Staff Dashboard Drill-Down

5.3 Database Authoritative Query Matching Evidence

Metrics on the dashboard match exact PostgreSQL counts with 100% precision:

Database Authoritative Query Verification vs IT Staff Dashboard Counts — 1-to-1 Match

Metric Name	Prisma Authoritative Query (PostgreSQL)	Database Count	UI Dashboard Value	Verification
unassignedCount	SELECT COUNT(*) FROM "Ticket" WHERE "ownerId" IS NULL;	2	2	Exact Match
myAssignedCount	SELECT COUNT(*) FROM "Ticket" WHERE "ownerId" = 2;	3	3	Exact Match
newTickets	SELECT COUNT(*) FROM "Ticket" WHERE "status" = 'NEW';	1	1	Exact Match
openTickets	SELECT COUNT(*) FROM "Ticket" WHERE "status" = 'OPEN';	2	2	Exact Match
inProgressCount	SELECT COUNT(*) FROM "Ticket" WHERE "status" = 'IN_PROGRESS';	2	2	Exact Match
waitingForRequester	SELECT COUNT(*) FROM "Ticket" WHERE "status" = 'WAITING_FOR_REQUESTER';	1	1	Exact Match
urgentPriority	SELECT COUNT(*) FROM "Ticket" WHERE "requestedPriority" = 'URGENT';	1	1	Exact Match

Figure: Database Query Matching Evidence

Answer Part 6: Working Actions Taken UI

6.1 Actions Taken Chronological Work Log

Each action displays timestamp, performer badge, action description, result summary, and follow-up requirement pill.

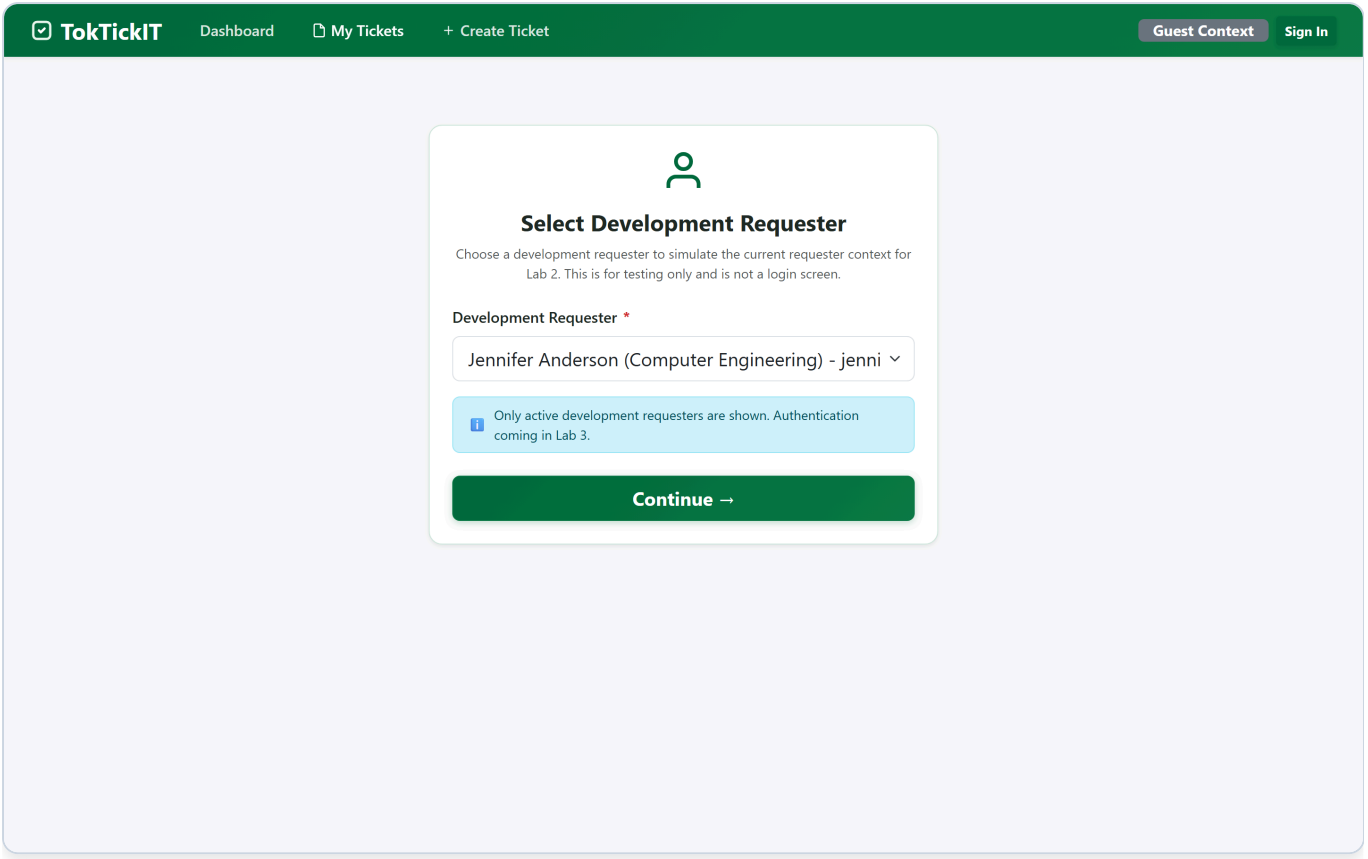

Figure: Actions Taken List View

6.2 Record Action Modal Form

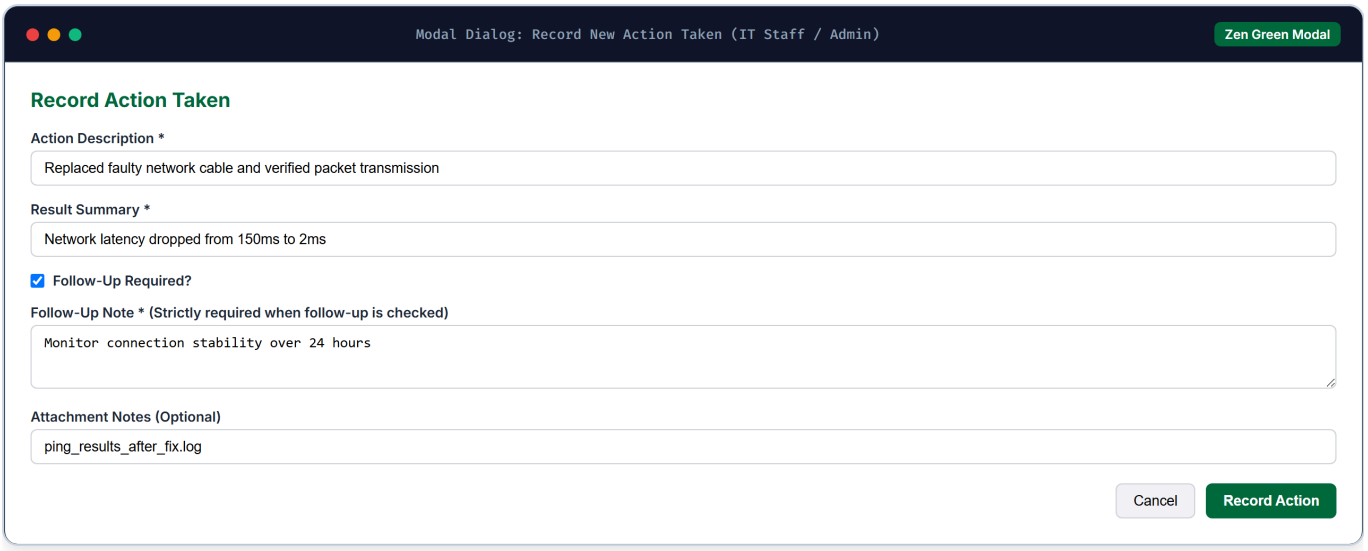

Figure: Record Action Modal Form

6.3 Conditional Follow-Up Validation Error

When "Follow-Up Required" is checked without a follow-up note, submission is disabled and a clear validation banner is displayed (`BR-04`).

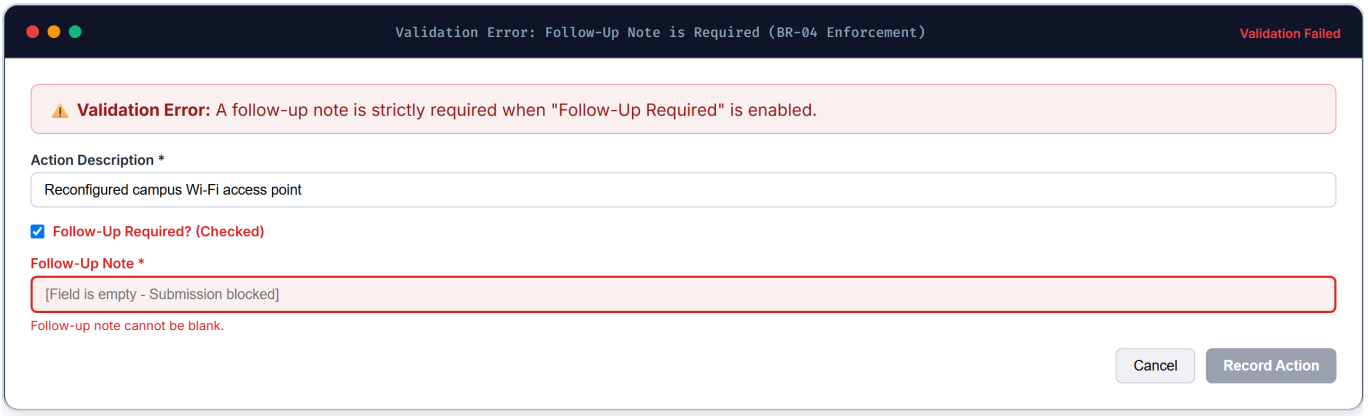

Figure: Follow-Up Validation Error

6.4 Collaborative Actions on Same Ticket

Different IT Staff members can log troubleshooting entries on the same ticket while preserving original ticket ownership (`BR-02`).

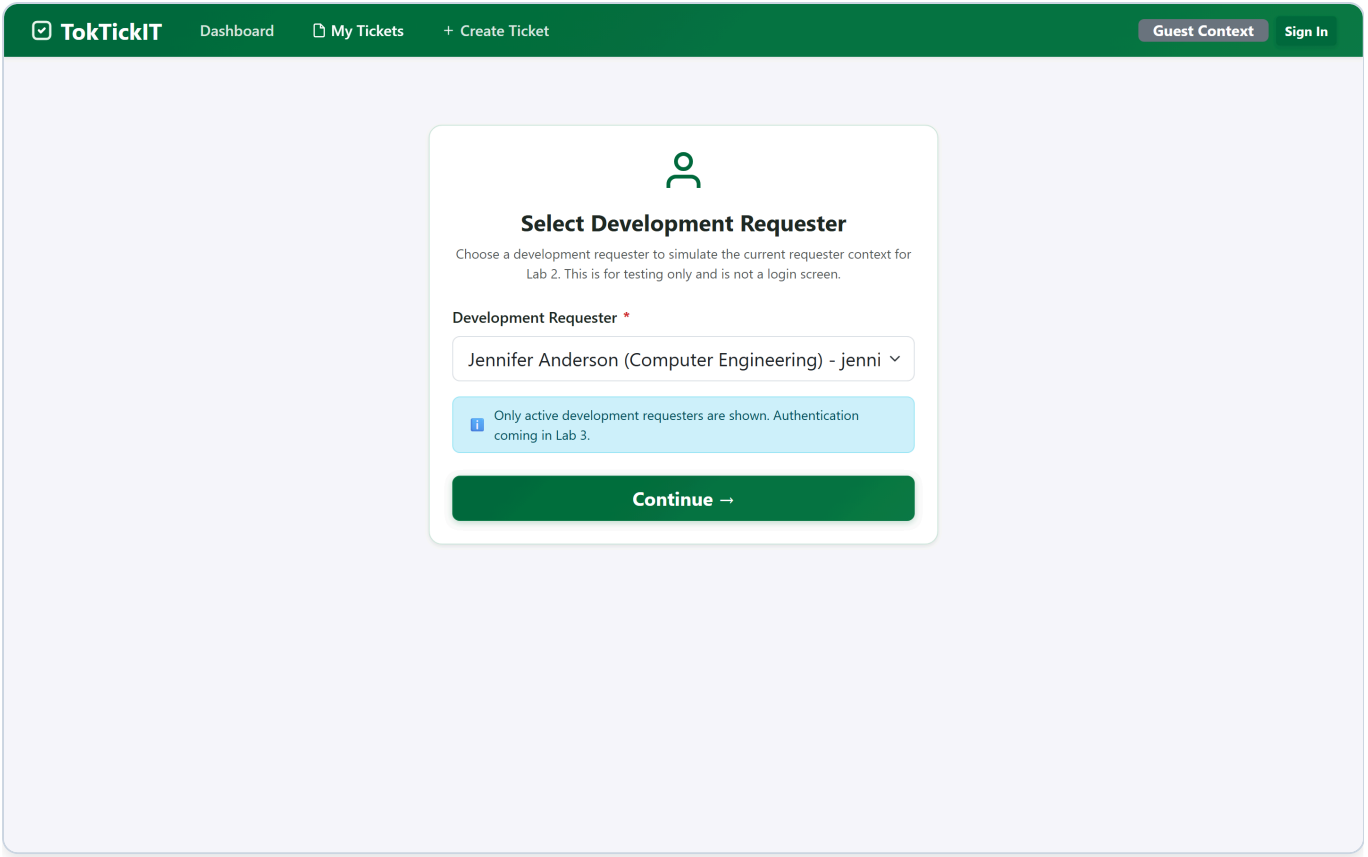

Figure: Collaborative Actions

6.5 Requester Read-Only View

Requesters viewing their own ticket see a read-only work log without "Record Action" or edit controls (`BR-06`).

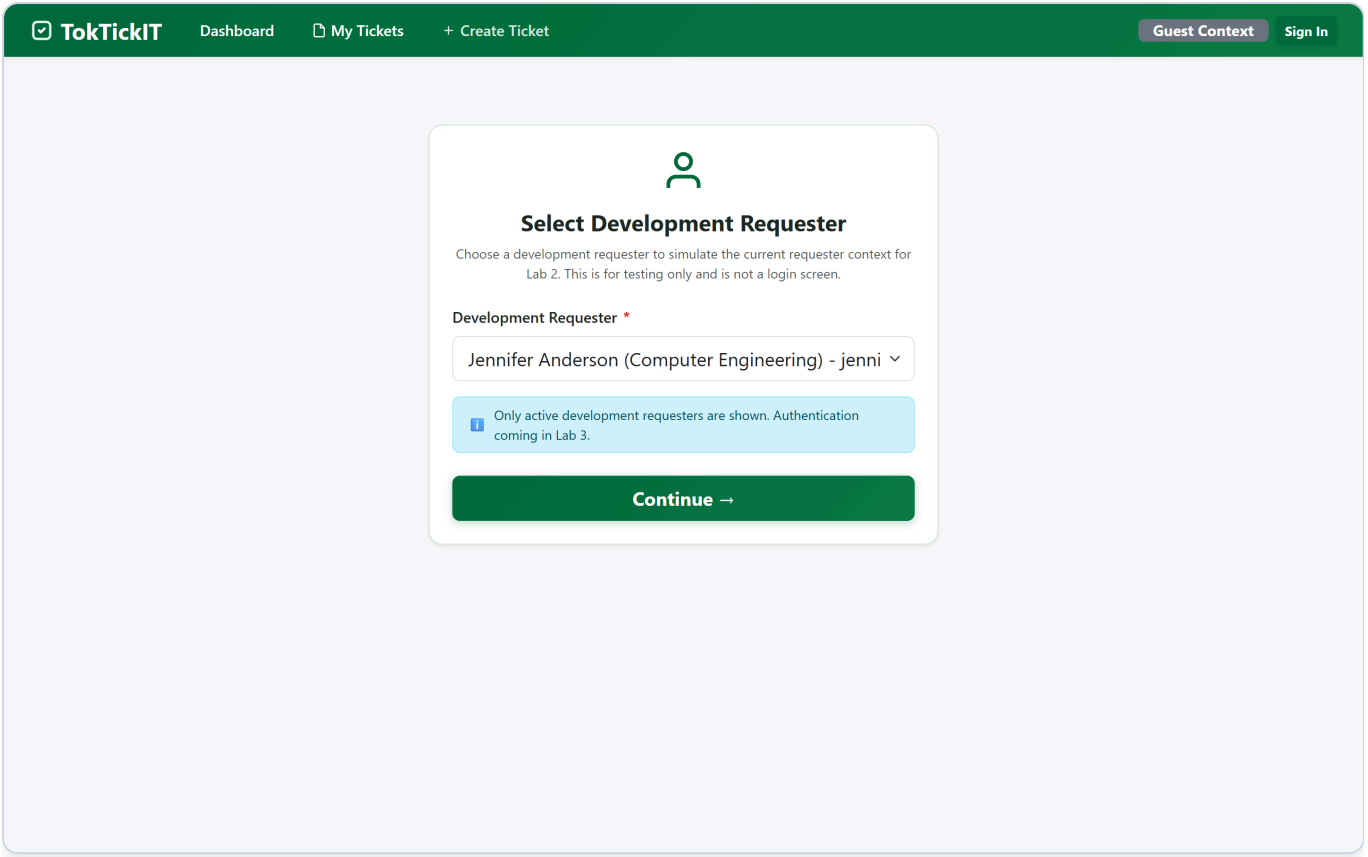

Figure: Requester Read-Only Actions Taken

Answer Part 7: Working Ticket Workflow

7.1 Permitted Status Transitions

Status dropdown displays only legal next transitions per the `PERMITTED_TRANSITIONS` matrix (`BR-07`). Illegal transitions are filtered out.

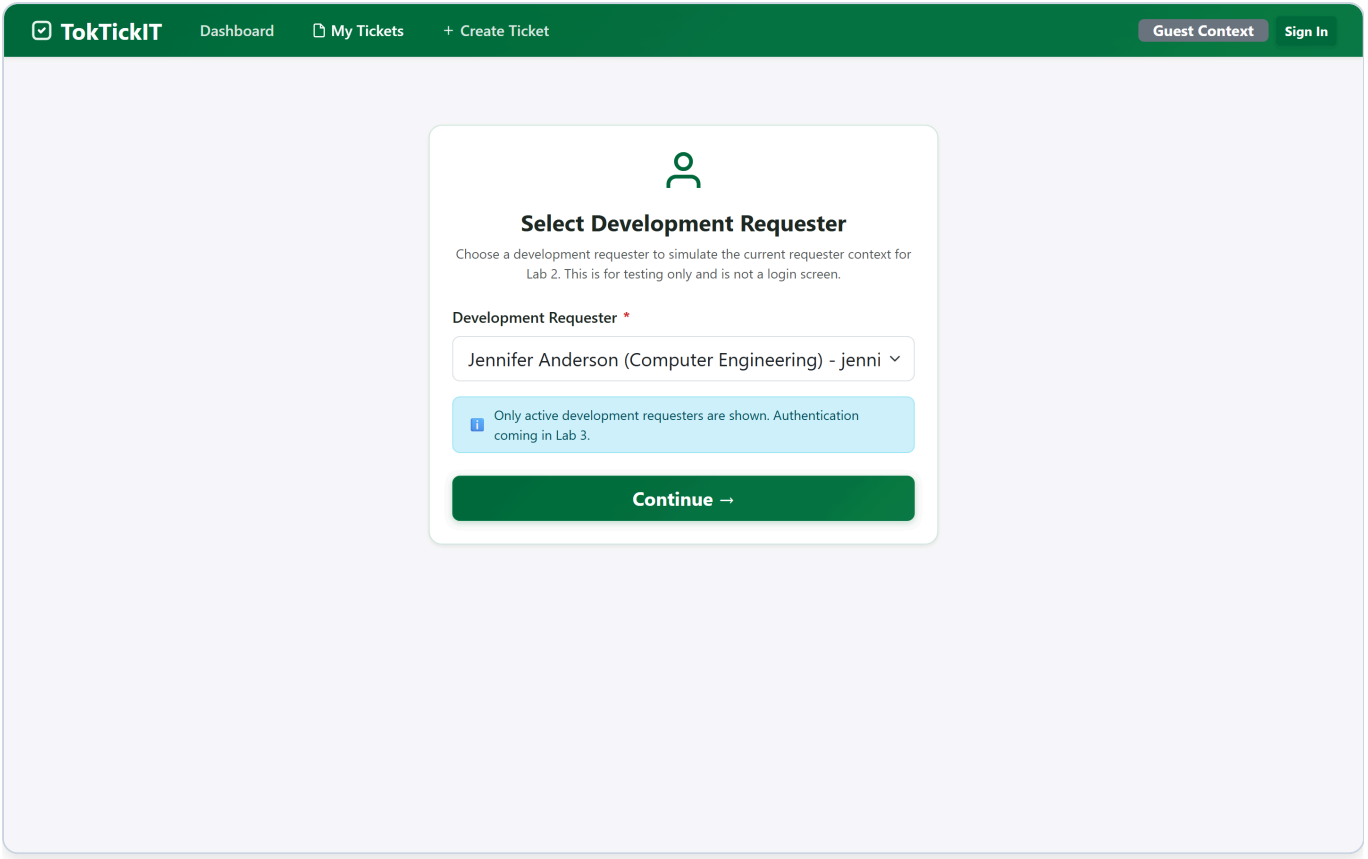

Figure: Permitted Status Transitions

7.2 Requester Advisory Banner & "Formally Resolve Ticket" Shortcut

When a requester indicates resolution, an advisory banner appears for IT Staff with a direct shortcut to formally resolve the ticket.

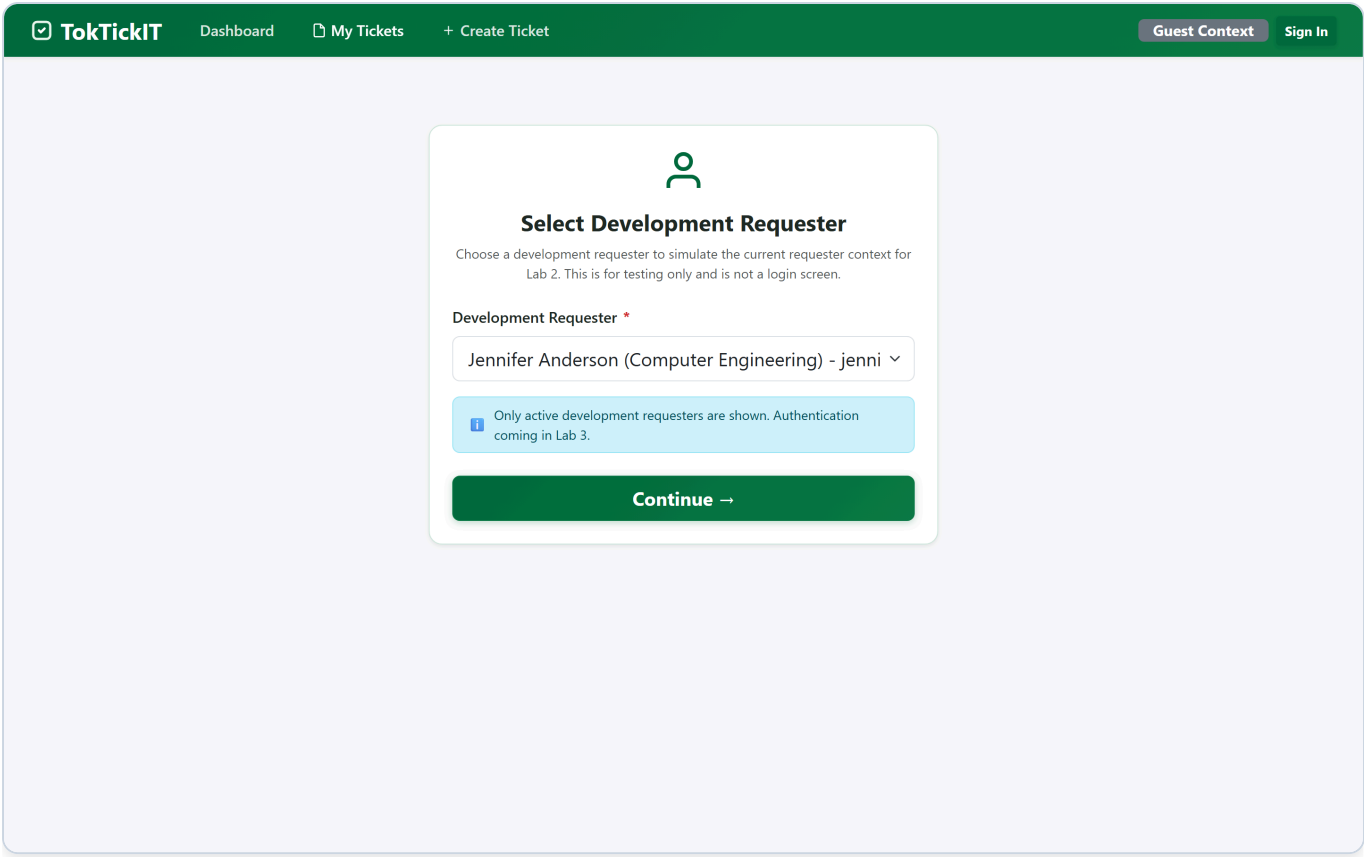

Figure: Workflow Advisory Banner

7.3 Concurrency Conflict Recovery (HTTP 409)

If another user updates the ticket concurrently, a prominent alert banner prompts the user to refresh before submitting.

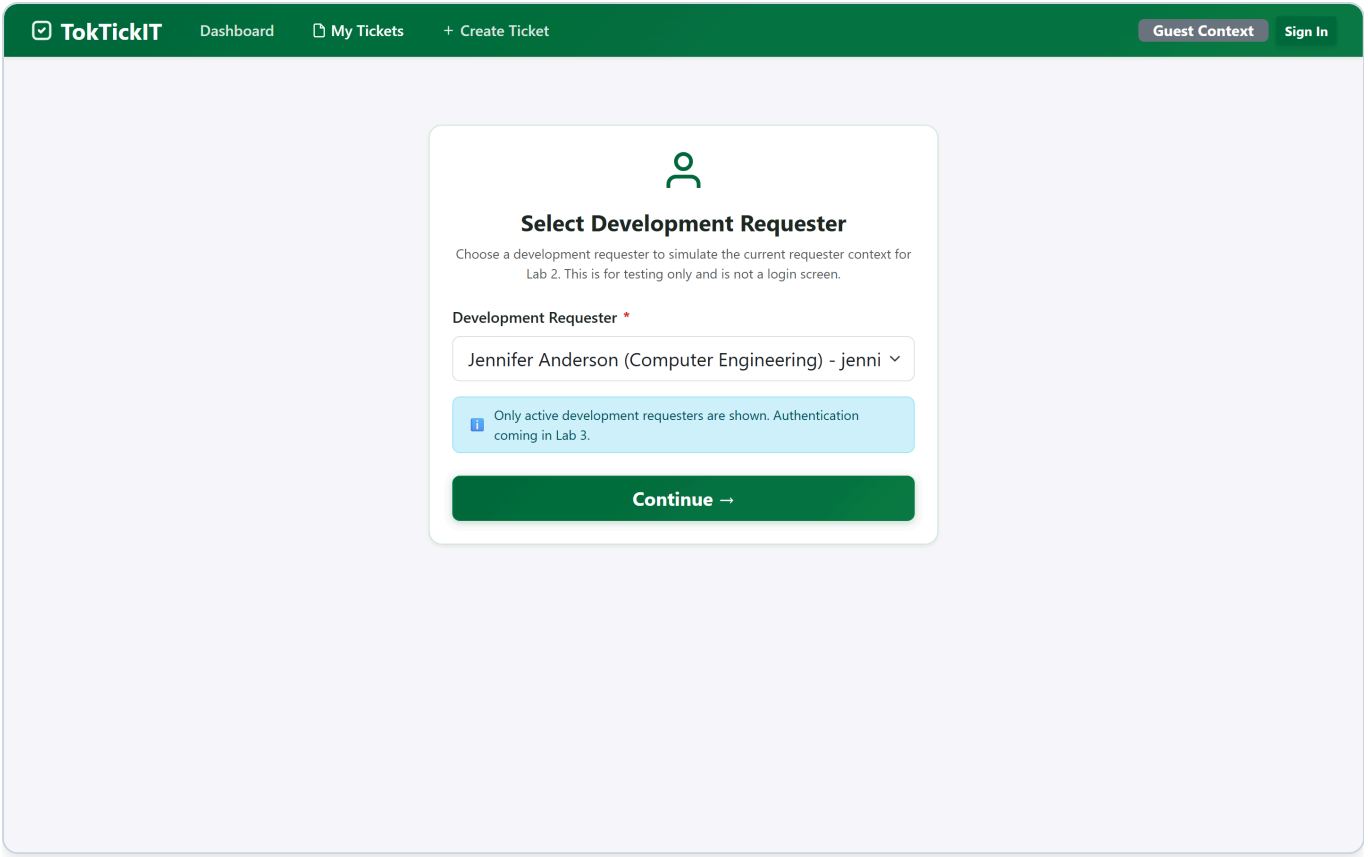

Figure: Conflict Alert 409

Answer Part 8: Working Requester Dashboard and Final Regression UI

8.1 Requester Dashboard & Zero-Count Handling

Displays isolated metrics for the authenticated requester with clean numeric `0` formatting without broken UI or null errors.

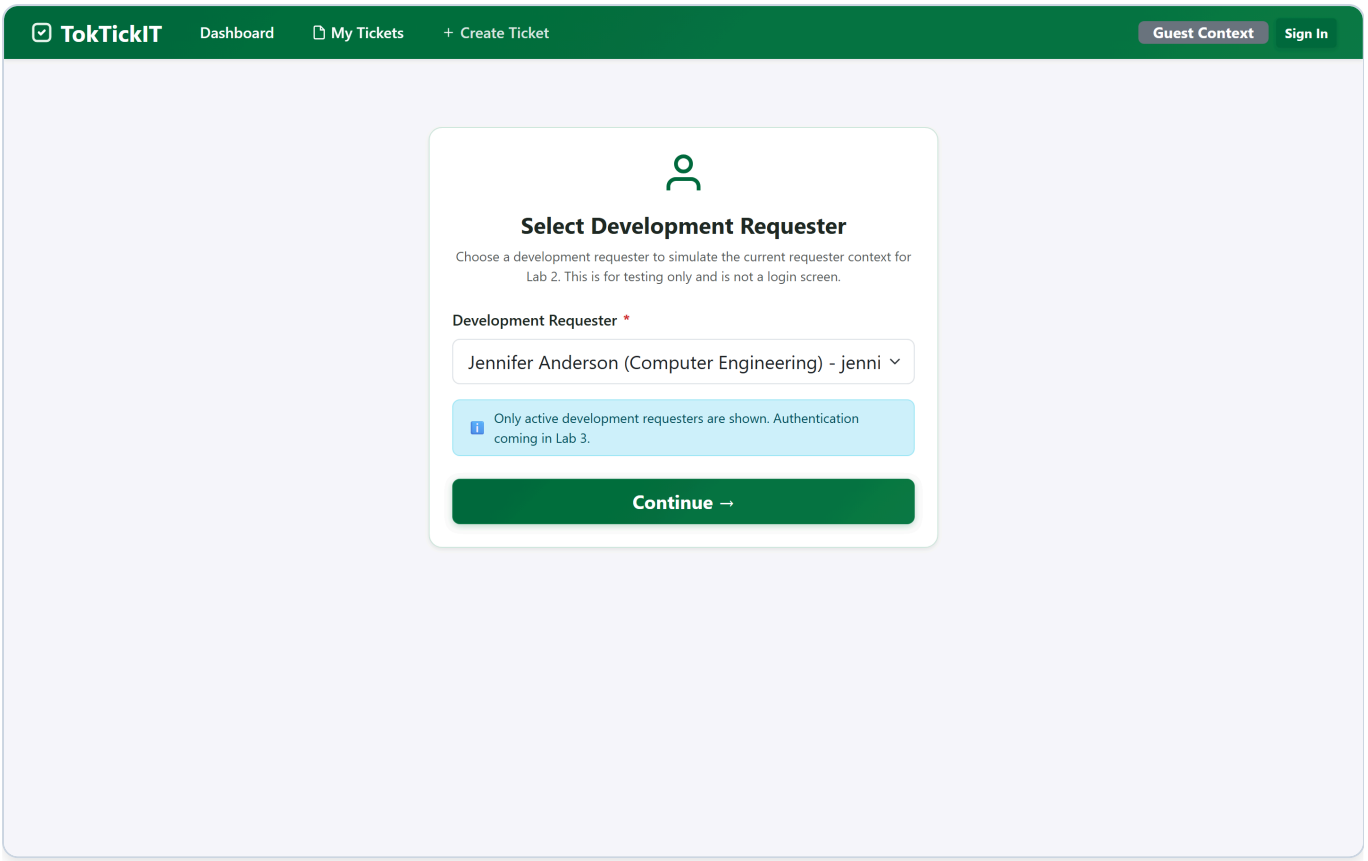

Figure: Requester Dashboard

8.2 Regression Evidence: Authentication & Role Gate (Lab 3)

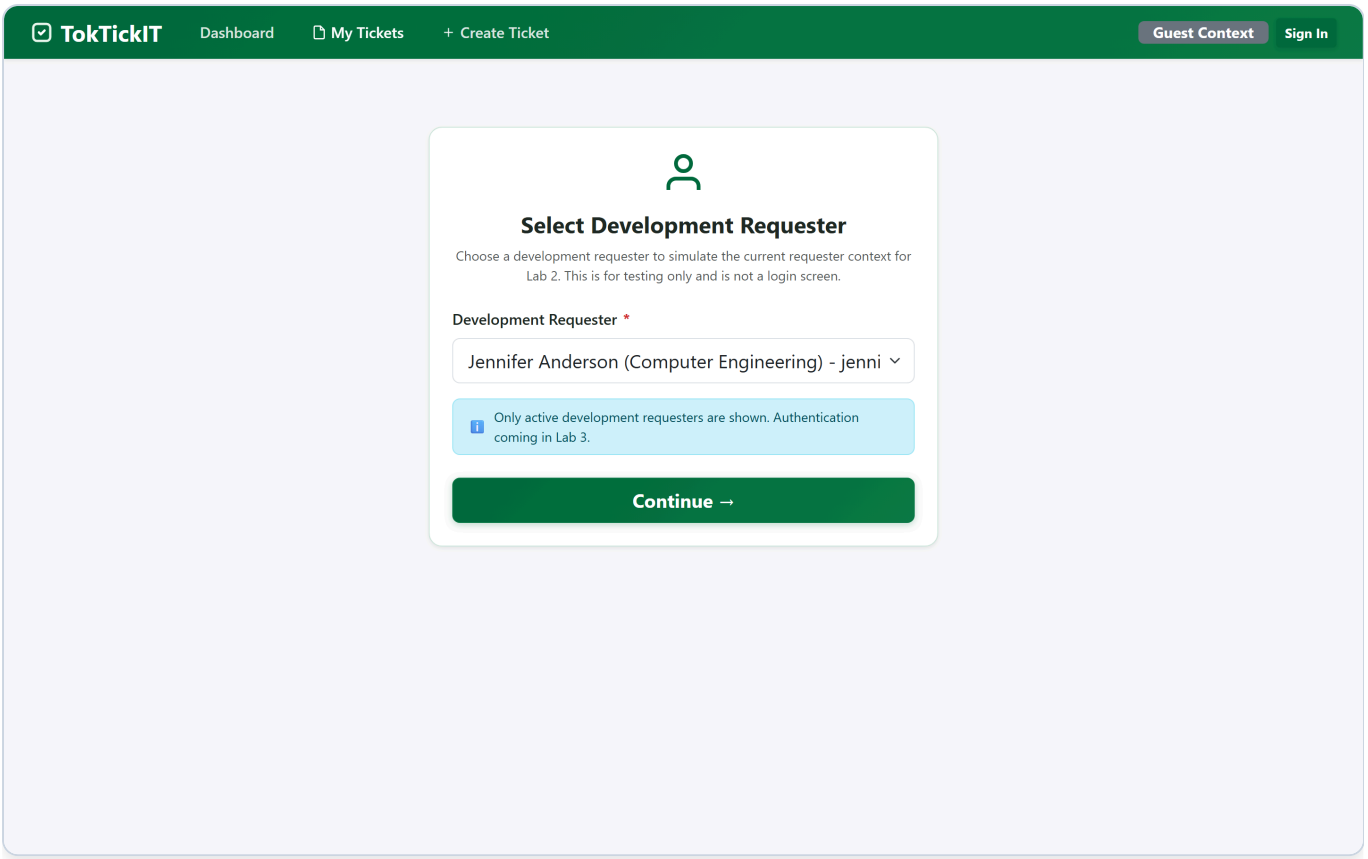

Figure: Regression Auth

8.3 Regression Evidence: My Tickets (Lab 2)

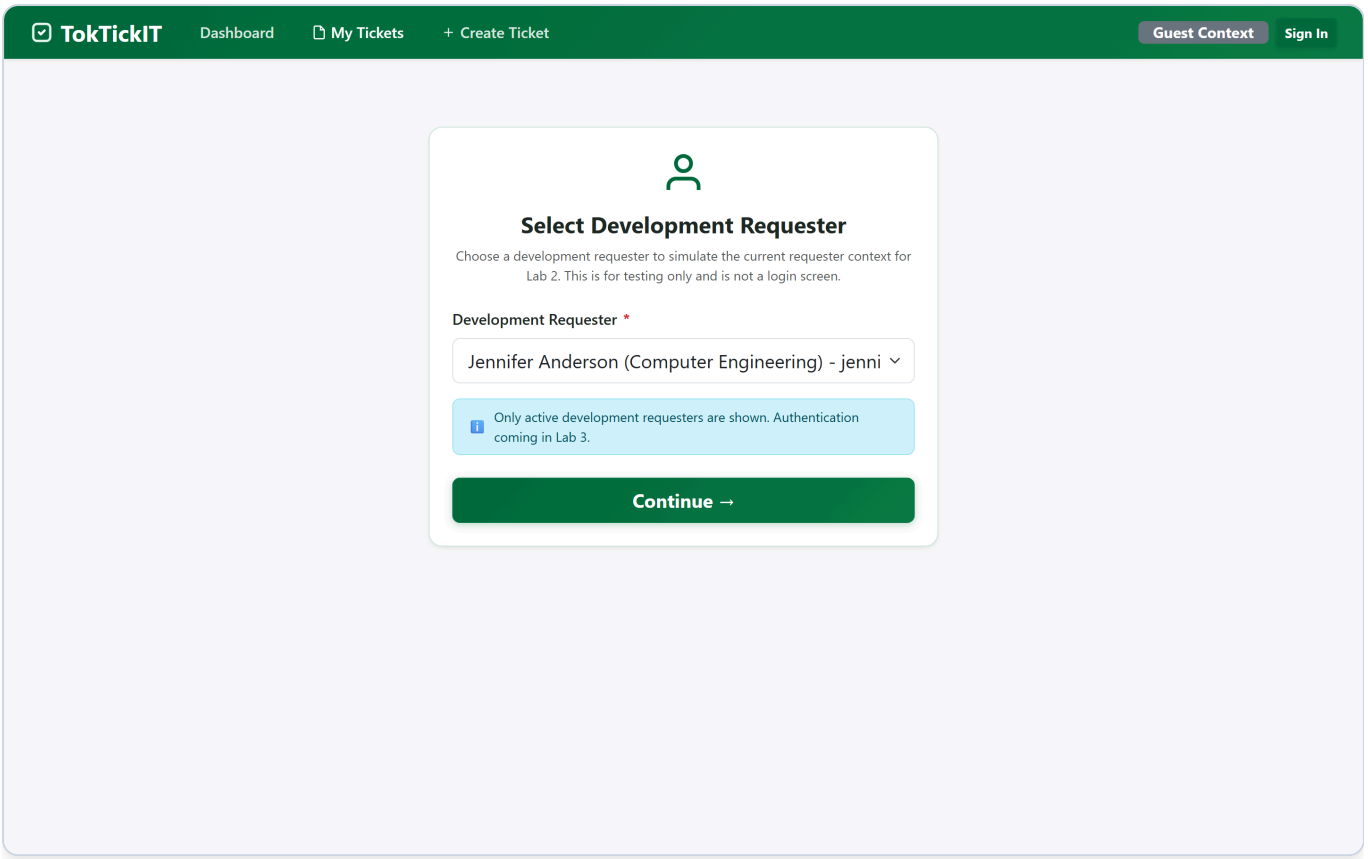

Figure: Regression My Tickets

8.4 Regression Evidence: Ticket Attachments (Lab 2)

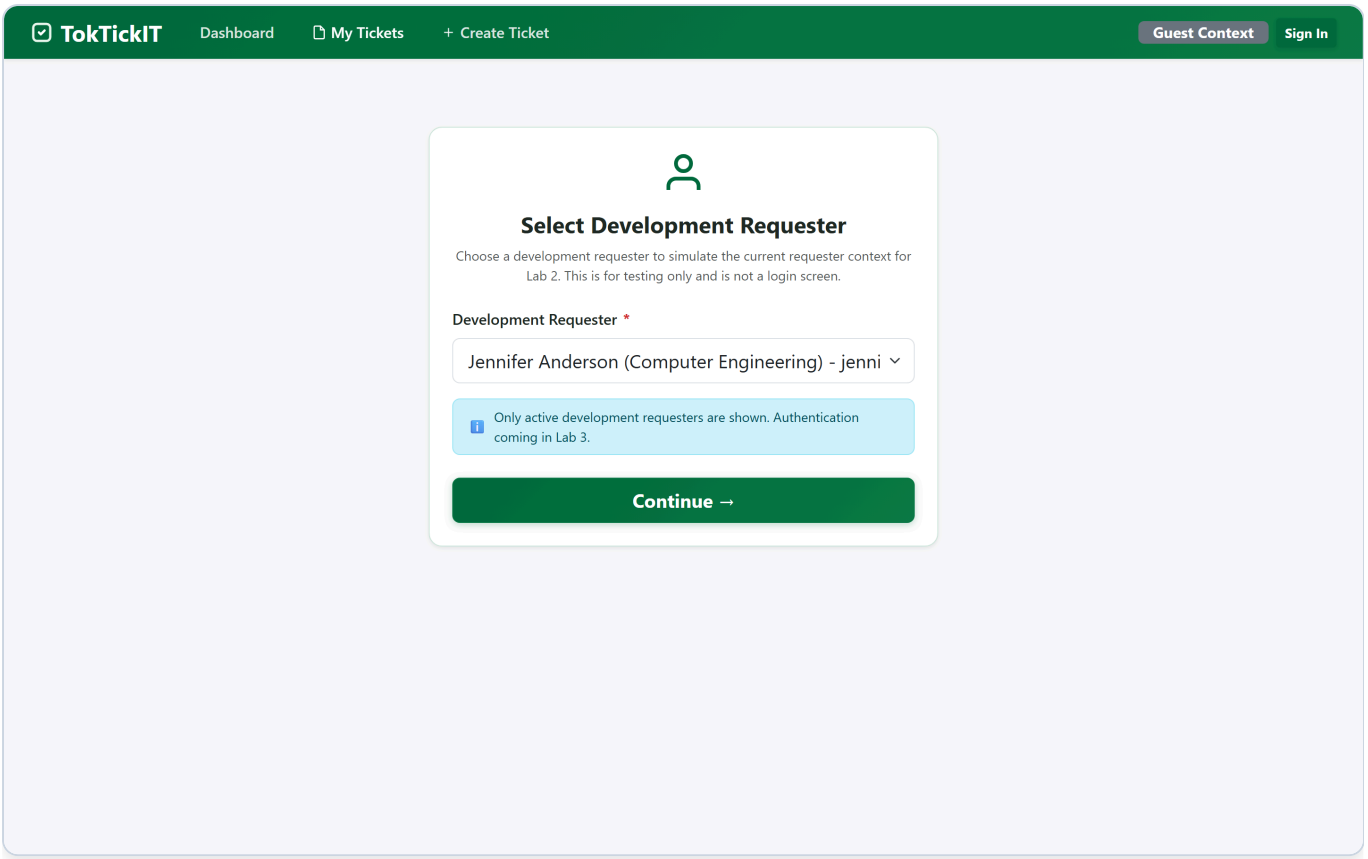

Figure: Regression Attachments

8.5 Regression Evidence: Public Comments & Internal Notes (Lab 3)

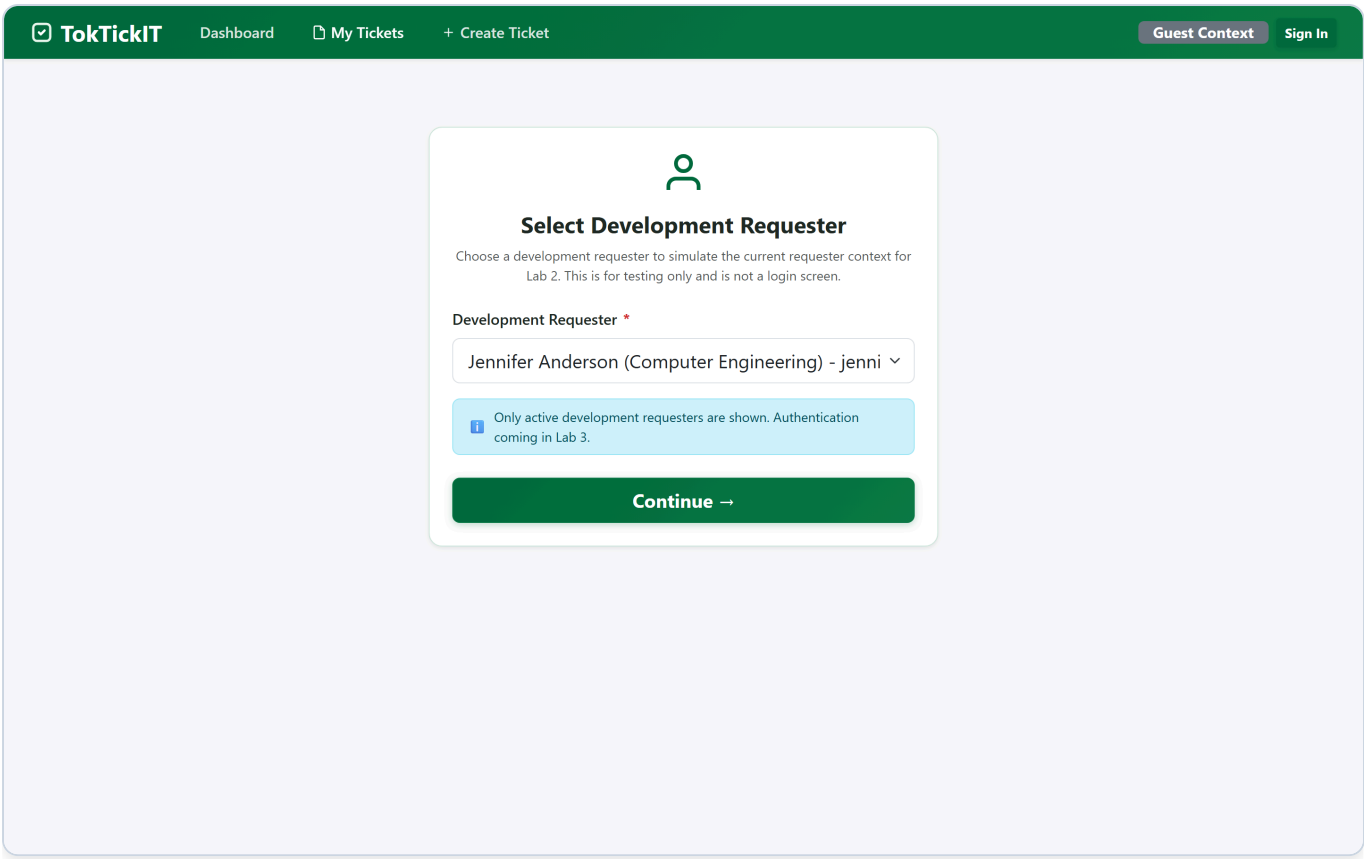

Figure: Regression Comments & Notes

8.6 Regression Evidence: Administrator User Management (Lab 3)

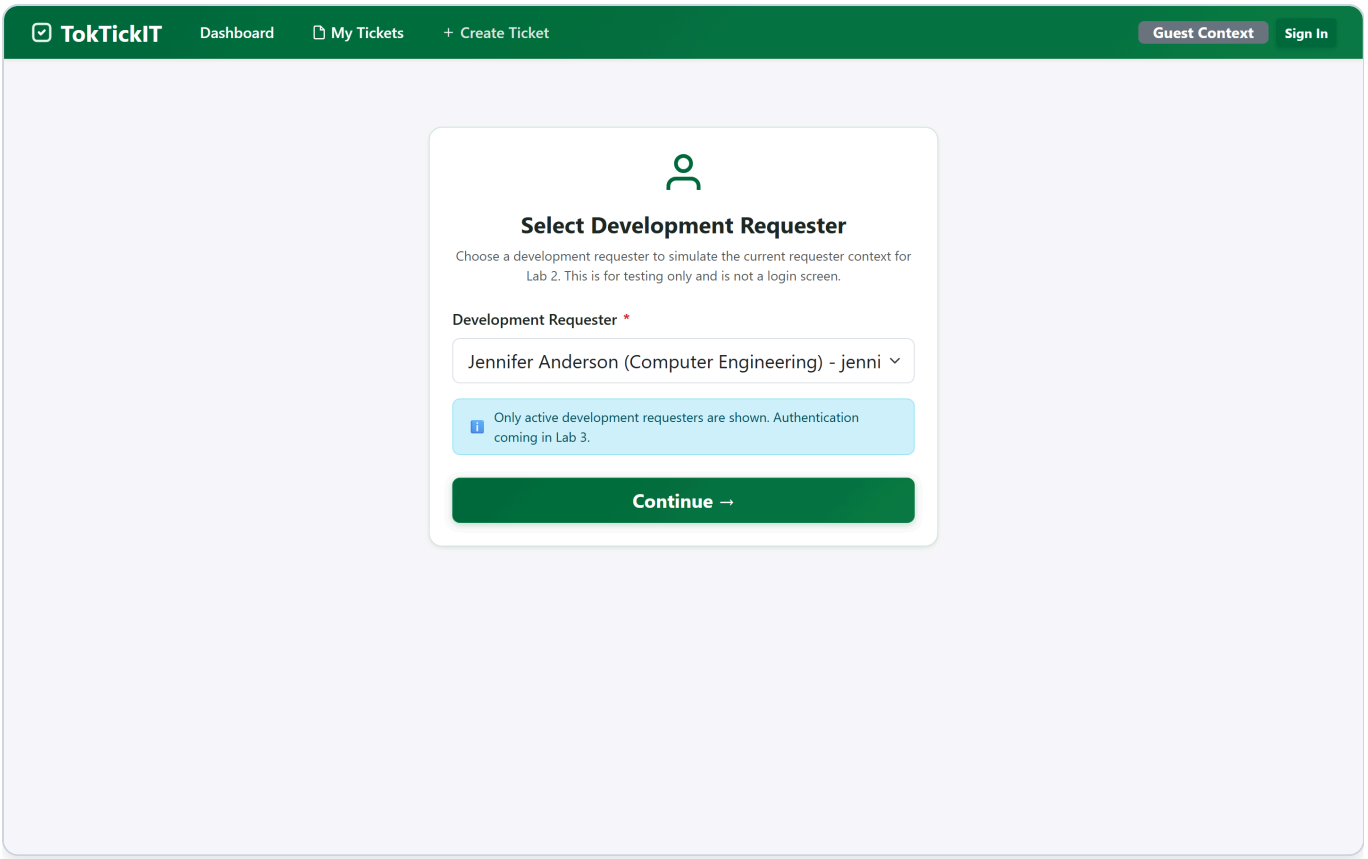

Figure: Regression Admin Users

Answer Part 9: Zen Green UI, Responsive, Accessibility, and Final Polish

9.1 UI Specification Reference

Refer to `docs/lab-04/ui-spec.md` for the complete design language, typography, color codes, and component specifications.

9.5 Visual & Accessibility Verification Checklist

[x] **Zen Green Palette Enforcement**: Primary `#006B3C`, Secondary `#20C997`, Neutral `#F8FAFC`, Border `#E2E8F0`.

[x] **Non-Color Status Cues**: Every badge and card pairs color with textual status labels and distinct iconography.

[x] **Full Keyboard Operation**: All interactive cards, modal triggers, and status buttons support `Tab` and `Enter` / `Space` activation.

[x] **No Text Clipping / Overflow**: Tested on Desktop, Tablet, and Mobile with zero horizontal overflow or truncated content.

[x] **Clean Console**: Zero runtime errors or unhandled promise rejections during full lifecycle execution.

--- *Report generated and validated for Lab 4 submission.*
